

BUYING GUIDE

HENSVIK

DESIGN

Carina Bengs.

CARE

Wipe clean with a damp cloth and mild detergent. Then dry with a clean, dry cloth.

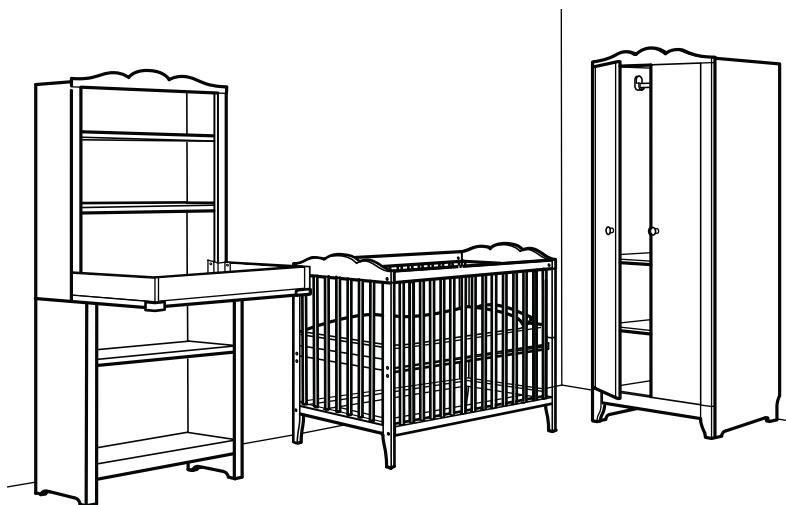

SAFETY

All our children's products are tested and subjected to a risk analysis to ensure they comply with the most rigorous criteria in every country where IKEA products are sold. This means, for example, that the cots meet the following demands:

- Stable, durable construction
- The gap between the bars is designed for optimum safety.
- Strong bed bases.
- Rounded edges and corners.
- No small components that can be removed, or work loose to eliminate the risk of choking.
- Ventilated bed base to avoid fungal growth.
- Non-toxic materials and surface treatment.

Children rarely do what you expect them to do. They climb, clamber and play with things in ways that are often difficult to foresee. For that reason, always use the wall anchors supplied to secure all storage furniture that is more than 23% in height safely to the wall.

All our changing tables fulfill several safety demands in order to minimize the risk of injuries to your baby due to, for example, falls. Never leave your baby unattended on the changing table.

Suits both small and big

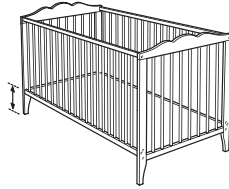

HENSVIK is a shelf unit that you can quickly and easily convert into a changing table. It has plenty of room for all your baby's things and also provides a practical place for nappy changes. When your baby grows and you no longer need a changing table, it becomes a great place for toys and books.

A high standard of accuracy has been sought in the preparation of this brochure. We apologize for, but will not be bound by or responsible for, errors and omissions in this brochure.

All the products (shown here) may not be available at the store. Please contact the staff or look at www.IKEA-USA.com for more information. For more detailed product information, see the pricetag and the Internet. All units require assembly.

HOW TO USE

The crib can be adjusted to prevent the child from injuries resulting from the child trying to get in and out of the crib on its own. The bed base can be placed at two different heights, so when the child starts to move around more you may lower the bed base. When your child is big enough to

climb in and out of the crib, convert the crib into a day bed, so your child can reach the floor without risk of falling.

All of our cribs are tested and comply with all U.S. standards and requirements.

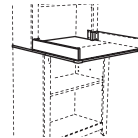

ALL PARTS AND PRICES

For safety reasons, always use the wall brackets included to secure all storage furniture that is more than 23 5/8" in height safely to the wall.
